Dear Bob,

I want to let you know how pleased we are here at the University of California @ Davis Student Housing department with the ETL XL600 shower head. As you know we have purchased about 1,500 over the last few years. We use them in all of our residential facilities on campus including traditional dormitories, suites, and apartments.

In the past the only feedback I got from our students regarding shower heads was complaints about their performance. Ever since we installed the XL600 heads the complaints have stopped. However, now I get occasional calls praising our shower heads! This was unheard of prior to the use of the XL 600. Students love the spread and feel of the spray. My maintenance staff loves them because they are virtually 100% maintenance free. They almost never clog and are virtually indestructible.

We have calculated that we are saving about 13 million gallons per year of water by using these shower heads. With saved water also comes energy savings from having to heat less water. Based upon water savings, energy savings, and sewer savings the payback period on these shower heads is about one year.

I have recommended your shower head to many colleagues at other colleges and universities in the western United States and I will continue to do so.

Best Regards,

Clyde W. Froehlich, Assistant Director-Facilities (530) 752-4265 cwfroehlich@ucdavis.edu
